

Product Data Sheet

Date of Issue: 26 Nov 2019

1. Product Information

- Product Name : Flamma® 648 protein labeling kit
- Catalog Number : XPL2104
- Packing Unit : 1 Kit
- Appearance : Blue Liquid
- Storage Conditions : Protect from Light at 4 °C

2. Additional Information

- Fluorophore Label : Flamma® 648
- Reactive Group : Vinylsulfone
- Reacting with : Primary amine

3. Description

Flamma® 648 Protein Labeling Kit is designed to effectively label antibody or protein. Flamma® Fluor dyes display strong absorption, high fluorescence quantum yield and high photostability, and they maintain good fluorescence activity and stability after conjugated to biomolecules. The maxima of Ex/Em values are at 648/663 nm. Vinylsulfone reactive group is selectively bind to the primary amines of proteins to create efficient dye-protein conjugates. Flamma® Fluors Protein Labeling Kits enable to perform the entire step from labeling to purification and contain all necessary chemicals and consumable materials. We offer Flamma® 648 protein labeling kit as a convenient method to label large amount of protein and antibody.
