## 3. Description

cRGD, Flamma® 675 is an angiogenesis imaging fluorescent probe, made up of a covalent-connection of cyclic RGD with Flamma® 675. Cyclic RGD binds preferentially to  $\alpha\nu\beta3$  integrin with high affinity. Integrin  $\alpha\nu\beta3$  is known to strongly involve in the regulation of angiogenesis. The  $\alpha\nu\beta3$  is generally expressed in low levels on the epithelial cells and mature endothelial cells, but it is highly expressed in many solid tumors. Cyclic RGD peptides are also able to bind  $\alpha\nu\beta5$ ,  $\alpha5\beta1$ ,  $\alpha6\beta4$ ,  $\alpha4\beta1$ , and  $\alpha\nu\beta6$  integrins, which may help enhance their tumor uptake due to the increased receptor population. We offer cRGD, Flamma® 675 as in vivo fluorescent probes for imaging of blood vessels, tumors and angiogenesis.
